

The screenshot shows a file explorer window. At the top, there is a search bar with the placeholder text "Filter files by name" and a magnifying glass icon. Below the search bar, the current directory is indicated as "/". The main area displays a list of files and folders with two columns: "Name" and "Last Modified". The "Name" column has a small upward-pointing triangle icon next to it. The "Last Modified" column shows the time since the file was last modified. The files listed are:

| Name             | Last Modified |
|------------------|---------------|
| data             | 16 days ago   |
| notebooks        | 16 days ago   |
| • DataScience... | seconds ago   |
| • README.md      | 16 days ago   |

Python (Pyodide)

##Some of the commonly used libraries used by Data Scientists include:

1. TensorFlow.
2. NumPy.
3. SciPy.
4. Pandas.
5. Matplotlib.
6. Keras.
7. SciKit-Learn.
8. PyTorch.

Data Science Tools

RStudio.

Apache Spark.

TensorFlow.

Below are a few examples of evaluating arithmetic expressions in Python

This a simple arithmetic expression to mutiply then add integers.

```
[2]: (3*4)+5
```

```
[2]: 17
```

This will convert 200 minutes to hours by diving by 60.

```
[5]: 200/60
```
